

Zero Crystalline Silica Surface Manufacturer

Patented Ultracera® + 6 years mature product time

Patented by USPTO, Ultracera® is created using a unique blend of porcelain-based powder and decorative aggregates. This Zero Crystalline Silica Material (may contain <1% trace level crystalline silica contaminations) provides a premium surface with same or better technical and aesthetic performances as traditional quartz surfaces. Polishing, cutting and any other finishes could be done by the same tools of machineries as to the quartz slabs.

Ultracera® Plus

Our cutting-edge UV-resistant technology, achieved by incorporating customized resins into our porcelain-based powder, has significantly reduced color change and notably enhanced the durability of the products. Ultracera surfaces enjoy significant demand for various outdoor applications, including outdoor kitchen tops, wall facades and outdoor tables.

Withstand human living temperatures ranging from -30°C (-22°F) to 60°C (140°F).

Edge Profiles

ESG Ultracera® (Environmental, Social, Governance)

A Holistic Approach to Sustainability

The sustainable porcelain-based powder serves as our fundamental raw material, paving the way for responsible production. Continuously refining our processes, we aim to enhance eco-logical efficiency by harnessing solar energy, implementing water recycling, and optimizing low carbon logistics. We're dedicated to utilizing UV-resistant resin to uphold our commitment to sustainability.

Through our unwavering dedication to sustainability and ethical practices, Ultracera Surfaces strives to lead the way in creating a world where ecological harmony and innovative progress go hand in hand.
